**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-6, drawn to a method and apparatus for registering an IP terminal device, classified in class 370, subclass 230.
  - II. Claims 7-9, drawn to a network-gatekeeper device, classified in class 370, subclass 401.
  - III. Claims 10-12, drawn to a network-gateway device, classified in class 370, subclass 401.
  - IV. Claim 13, drawn to an IP terminal device, classified in class 370, subclass 352.
2. Inventions I, II, III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as registering a cordless telephone in a network accessible thorough a private branch exchange; however, doesn't necessarily require the specific gatekeeper, gateway, and IP terminal device specified by groups II, III and IV, respectively. See MPEP § 806.05(d).
3. Invention II has a separate utility such as using the gatekeeper device in a conventional IP network instead of the Voice over IP integration disclosed in the specification. Furthermore, the gatekeeper doesn't necessarily have to be used in

Art Unit: 2666

conjunction with the registration process claimed in group I, the gateway device claimed in group III or the IP terminal device claimed in group IV. See MPEP § 806.05(d).

4. Invention III has a separate utility such as a gateway between two separate IP networks. The gateway device doesn't necessarily have to be connected to the line-switching exchanger claimed in group I and doesn't need the specific gatekeeper claimed in group II or the terminal device claimed in group IV. See MPEP § 806.05(d).

5. Invention IV has a separate utility such as a cordless phone in a network with a memory and registration unit; where by the cordless phone can be used to store and register the extensions of other devices within the same network. The IP terminal device doesn't necessarily have to be used in the registration method claimed in group I and doesn't need to be connected to the specific gatekeeper claimed in group II or the specific gateway claimed in claim IV. See MPEP § 806.05(d).

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. A telephone call was made to Thomas Bean on 12/28/2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
